A MESSAGE FROM OUR FOUNDERS

Two generations.
One standard of excellence.

Nexa Transmission was established on the conviction that India's most demanding industries — steel, cement, mining, and railways — deserve transmission solutions engineered without compromise. That conviction is the foundation shared by both of us.

PRITAM ARORA — FOUNDER & MANAGING PARTNER

Central India is one of the fastest-growing industrial regions in the country. The expansion of cement, steel, mining, and core manufacturing activity across Chhattisgarh and the surrounding region has created a sustained and growing demand for reliable, high-performance transmission solutions. Yet for many years, industries in this region had no credible local partner — no precision industrial gearbox manufacturer rooted here, accountable here, and built specifically to serve these industries. That gap is what Nexa Transmission was founded to fill.

Over twenty-five years in the gear industry, I have witnessed a fundamental shift in how heavy industry approaches power transmission. The tolerance for underperforming drives — those that merely function — has given way to a clear and justified demand for precision-engineered solutions that deliver consistent performance, extended service life, and measurable reliability.

This evolution did not happen by chance. It was driven by plant operators and engineers who recognised that transmission quality has a direct bearing on uptime, productivity, and operational cost. Nexa Transmission was built to meet that standard — drawing on decades of technical experience and an uncompromising approach to quality at every stage of manufacturing.

KABIR ARORA — CO-FOUNDER & CEO

Building on that foundation, our focus at Nexa is on advancing what precision manufacturing can deliver. Our facility is fully integrated — encompassing raw material processing, hobbing, heat treatment, precision gear grinding, and CMM-based dimensional verification — ensuring complete quality control at every stage, entirely in-house.

We are equally committed to extending the value of existing assets through our gearbox refurbishment programme, which reduces operational costs for our customers while delivering a meaningful reduction in environmental impact. Alongside this, we are developing an AI-enabled predictive maintenance platform to help plant operators transition from reactive to condition-based maintenance. These initiatives reflect our broader commitment to being a long-term engineering partner, not merely a supplier.

None of this would be possible without the skilled and dedicated team at Nexa Transmission. Their technical rigour, attention to detail, and shared commitment to precision are what translate our standards into every gearbox that leaves this facility. We are deeply proud of the people who make this work.

The experience of the past and the ambition for what lies ahead are what define Nexa Transmission. We welcome the opportunity to demonstrate that commitment.
